## SOFTWARE/FIRMWARE LICENSE AGREEMENT

IMPORTANT: THE SUBJECT PROGRAMS ARE LICENSED BY INFOSIGHT CORPORATION TO END-USERS FOR THEIR USE ONLY ON THE TERMS BELOW. ACCEPTING AND USING THESE PROGRAMS INDICATES YOUR ACCEPTANCE OF THESE TERMS. THIS IS A LEGAL AGREEMENT BETWEEN YOU, THE END USER, AND INFOSIGHT CORPORATION.

1) GRANT OF LICENSE. INFOSIGHT CORPORATION ("INFOSIGHT") agrees to grant to you a non-exclusive license to use the INFOSIGHT software/firmware program (the "PROGRAM") subject to the terms and conditions of this license agreement.

2) DEFINITION OF TERMS. The term SOFTWARE refers to a computer program stored on CDROM, floppy diskette, hard disk, magnetic tape, paper tape or other media that must be loaded into the computer's memory to be executed. The term FIRMWARE refers to a computer program stored in semiconductor memory (ROM, PROM, EPROM, EEPROM, NVRAM, etc.) that is an integral part of the computer's memory. Together, these forms of computer programs are referred to as the "PROGRAM".

3) COPYRIGHT. The PROGRAM(s) and Documentation are owned by INFOSIGHT and are protected by United States copyright laws and international treaty provisions. The PROGRAM(s) contain trade secrets and proprietary property of INFOSIGHT. You may make one copy of the PROGRAM(s) solely for backup or archival purposes provided that the copy clearly displays the INFOSIGHT copyright notice. Additional copies may be made when authorized to do so in writing by INFOSIGHT. In addition to any other right of INFOSIGHT, INFOSIGHT has the right to terminate this license if the terms of this license are violated.

4) RESTRICTION ON USE AND TRANSFER. The single-processor version(s) of the PROGRAM(s) and Documentation are to be used on one computer or embedded system at any one time. The multi-processor version(s) of the PROGRAM(s) and Documentation may be used over a network provided that the number of computers accessing the network simultaneously shall not exceed the number authorized by INFOSIGHT or for which you paid the corresponding multi-processor fee. You may not distribute the PROGRAM(s) or Documentation to a third party. You may transfer the license and complete package (retaining nothing) if the transferee agrees to the terms of this License Agreement. Neither the PROGRAM(s) nor the Documentation may be changed or translated without express written permission of INFOSIGHT. You may not reverse engineer, decompile or disassemble the PROGRAM(s).

5) WARRANTY for the subject PROGRAM(s) is covered under the INFOSIGHT STANDARD TERMS AND CONDITIONS OF SALE.

6) TERM. The license is effective until terminated. It may be terminated if you fail to comply with any term or condition of this License Agreement. You may terminate this License Agreement at any time. In the event of termination, you agree to destroy the PROGRAM(s) and Documentation together with all copies and related material.

7) YOUR USE OF THIS PROGRAM(S) acknowledges that you have read this License Agreement and agree to its terms. This agreement is complete and supersedes any other agreement that may have related to the subject matter of this agreement.

## PREFACE

The JM410 is based on the proven third-generation LabeLase® laser printer architecture, with advanced design features for the printing of single or multiple die-cut tags. The JM410 utilizes the same PC-based Producer™ interface as all LabeLase® printers, and features a larger 4" x 4" (100mm x 100 mm) print area.

This OPERATIONS AND MAINTENANCE manual is intended as a companion to the ONLINE REFERENCE MANUAL supplied with the Producer™ software and also available on the web at <http://www.infosight.com/labelaseproducer/index.htm>

This OPERATIONS AND MAINTENANCE manual will be automatically installed on your computer hard drive when installing Producer™ software. It may be found under the PROGRAMS menu with other INFOSIGHT software and HELP files.

## MINIMUM SYSTEM REQUIREMENTS

- ☐ IBM PC 100% compatible computer
- ☐ Pentium 400 MHz
- ☐ Windows 2000/XP/VISTA  
(\*\* Support for Windows 7 is pending 3rd party drivers)  
(\*\*Windows 95/98/NT are no longer supported for LabeLase® Producer™ applications.)
- ☐ 10MB available disk space
- ☐ 32MB RAM (64MB recommended)
- ☐ 1 communications port for connection to printer (serial, USB, or Ethernet depending on the communications option provided on the printer)
- ☐ Color monitor (800x600 resolution or higher recommended)
- ☐ JM410 firmware version 1.18 or higher
- ☐ LabeLase® Producer™ version 1.9 or higher

## **PRINTER SETUP**

The JM410 ID Tag Printer requires 100-240 VAC, 50/60 Hz, 2.4 A.

The JM410 ID Tag Printer should be positioned so that the power supply cord exits from the back of the machine.

The JM410 ID Tag Printer should be placed in a temperature controlled environment. This printer, though designed for industrial use, should be treated as any typical computer system and printer. Dirty environments will necessitate a more frequent cleaning schedule for internal optics.

A 12-foot (3.6 meter) RS-232 serial communications cable is provided for communicating with your Windows-based PC.

A 15-foot (4.6 meter) USB cable is supplied with the optional Convenience Package that includes USB/ethernet connectivity.

## **SOFTWARE INSTALLATION**

Before connecting the printer to your PC, LabeLase® Producer™ Software and communications should first be installed on your PC.

The latest release of Producer™ software should be downloaded directly from <http://www.infosight.com/labelaseproducer.htm>.

The easiest way to install the software is to download, unzip and run the Installer Full Package CD. In addition to installing the correct version of Producer™ for your specific printer model, it will also guide you through configuring the appropriate communications interface. In most cases this will allow you to skip the Printer Communications and USB Drivers sections of the manual.

Optionally, you may download only the individual components for Producer™ and the appropriate communications driver(s). The Producer™ component is a self-contained, single self-installing file. However, it will not automatically guide you through the configuration process for communications, and you must therefore download the drivers separately and follow the steps outlined in the Printer Communications and USB Drivers sections of the manual.

## SYSTEM CONNECTIONS & POWER-UP:

1. Attach the included RS-232 cable (or optional USB or ethernet cable) from the JM410 ID Tag Printer to your Windows-based PC running LabeLase<sup>®</sup> Producer<sup>™</sup> software.
2. Insert the AC power cord into a nearby power receptacle.  
**Note: Both sides of the incoming line voltage are fused. See the Maintenance section of instructions on replacing fuses.**
3. Place the security key into rear of machine, near the power cord exit point. The key functions as an ON-OFF switch.
4. Turn the key to the vertical (ON) position. NOTE: The security key can only be removed when in the OFF position.
5. Press the power switch to the ON position. The power switch is located directly above the power cord.

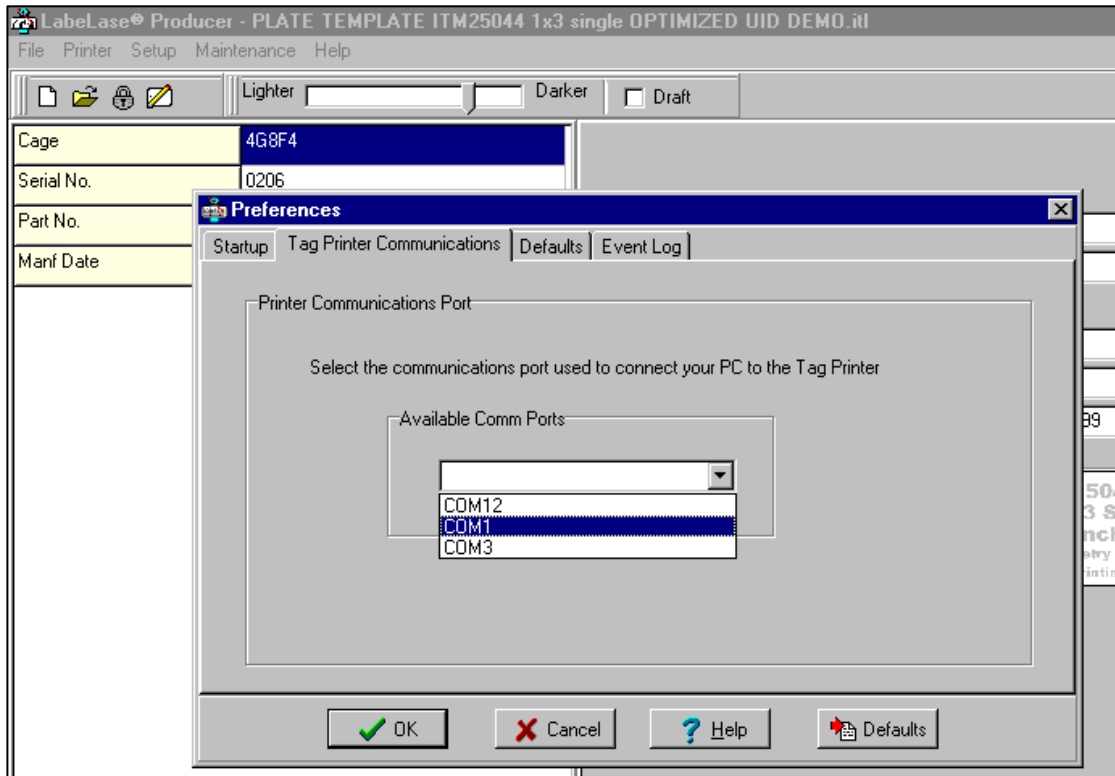

Optional USB & Ethernet ports exist under the RS 232 port (1, above). Refer to the Communications Section of this manual for instructions on installing the required drivers.

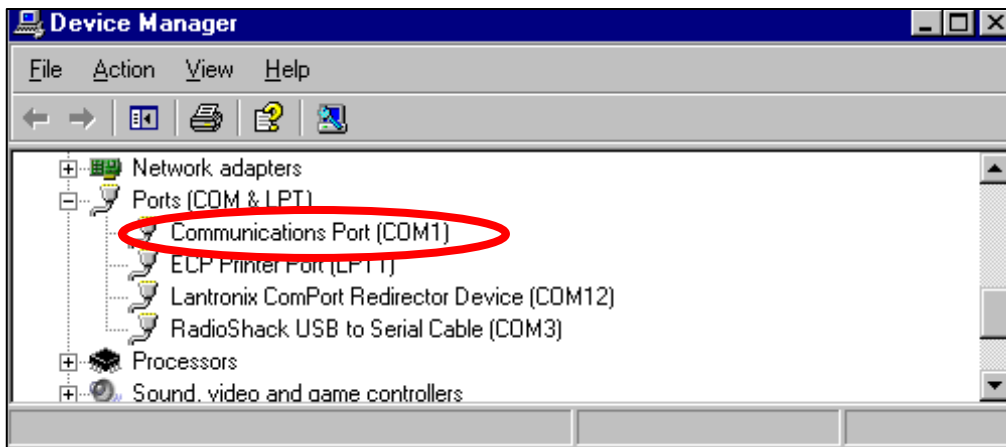

## PRINTER COMMUNICATIONS

The JM410 requires a communication link to a PC running Producer™ software. In addition to the standard serial RS232 link, an optional integrated USB/ethernet module is available.

The Producer™ software defaults to a serial port on COM1 and automatically configures the port settings. If your computer has a Comm port other than COM1, you can select that port from the Producer™ main menu, SETUP...PREFERENCES...TAG PRINTER COMMUNICATIONS (note: Supervisor login is required). Select the appropriate port from the pull-down list.

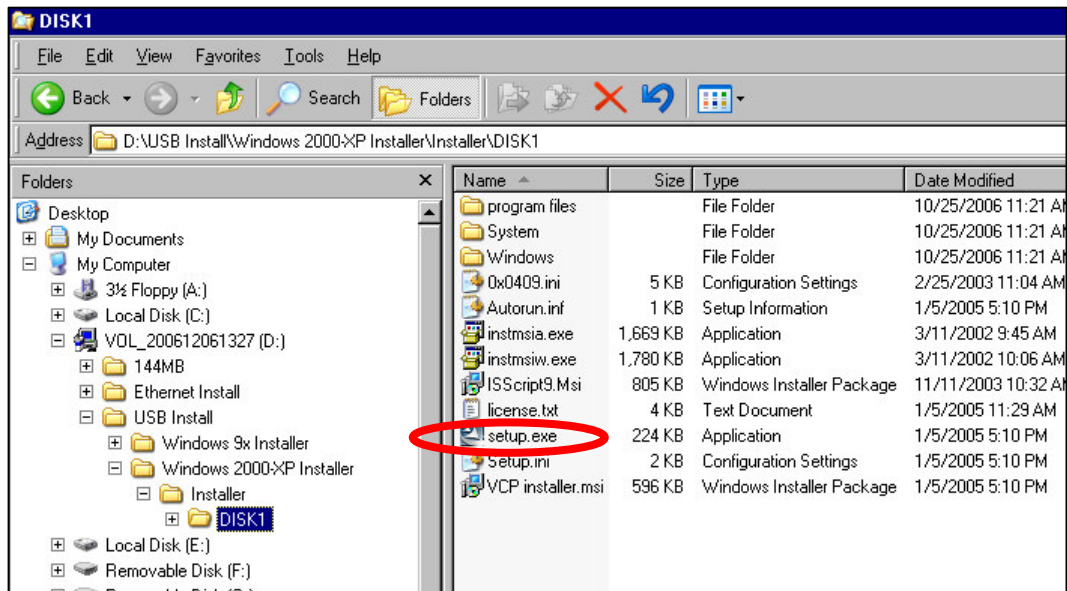

If you are uncertain about which port to use, more details about each comm port are available in the Device Manager in Windows Control Panel.

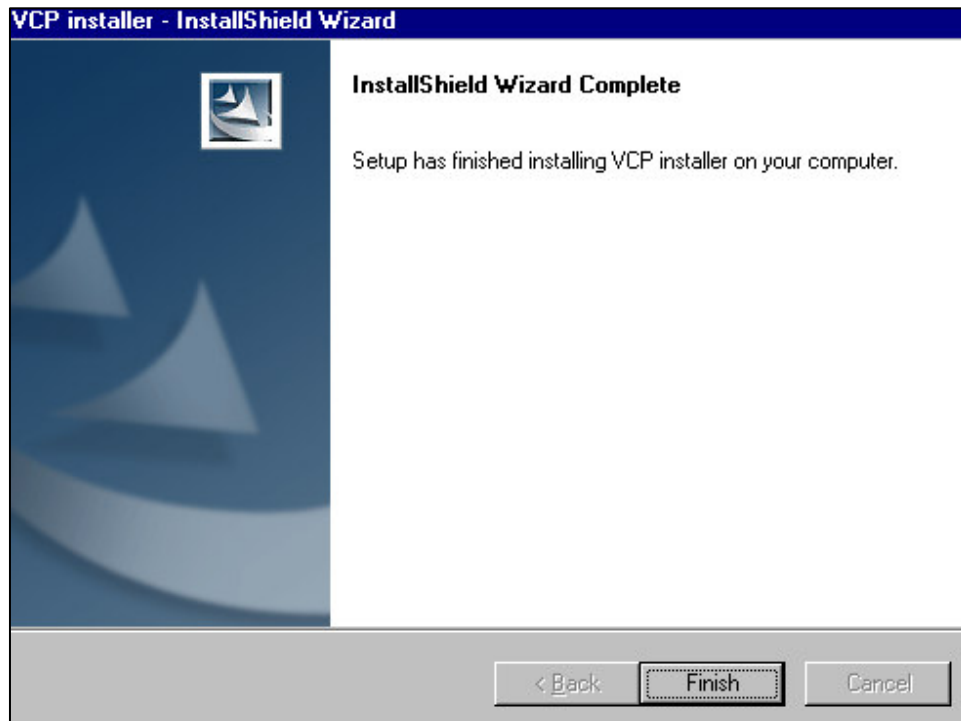

## INSTALLING USB DRIVERS

If your printer includes the USB/ethernet option, you will need to install the appropriate drivers first.

The USB driver can be downloaded from <http://www.infosight.com/labelaseproducer.htm>. After downloading, navigate to the appropriate installation directory, and run SETUP.EXE. This will run the Virtual Comm Port (VCP) Installer program.

When the VCP Installer has finished, click the Finish button.

Next, plug the USB cable into an available port on your PC and into the back of the JM410 ID Tag Printer. Power on the printer and you will see a New Hardware message for the Adapter.

Followed immediately by the Found New Hardware Wizard for the Serial Device:

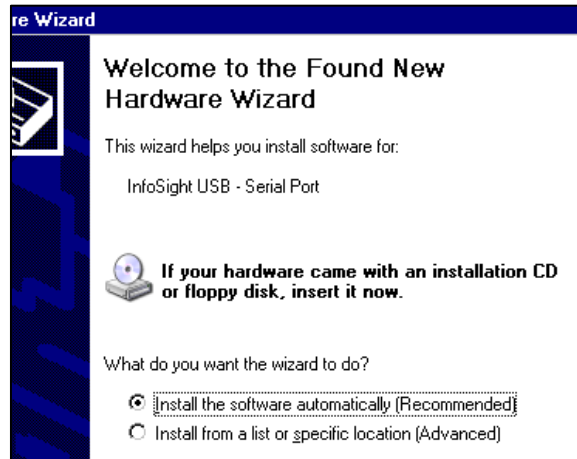

Install the software automatically as recommended. When the Wizard has finished installing, click on Finish.

Next you will receive a Found New Hardware message for the Serial Port

Followed immediately by the Found New Hardware Wizard for the Serial Port:

Install the software automatically as recommended. When the Wizard has finished installing, click on Finish.

Now return to the Producer™ main menu, SETUP...PREFERENCES...TAG PRINTER COMMUNICATIONS, and select the newly added comm. port which will probably be at the bottom of the list. If in doubt, check the list of Ports in the Device Manager in Windows Control Panel

The printer will now be recognized by Producer and you may proceed to print tags.

**SPECIAL NOTE:** Once the first printer is installed, each time you connect a new printer to your PC, the Found New Hardware Wizards for both the Serial Device and the Serial Port will launch. Follow the guided prompts to install the software automatically as above, and then select the newly installed comm. port in the Producer™ menu.

## STARTUP SEQUENCE:

1. Confirm that the rear power switch is on and the rear key switch is in the vertical ON position.
2. Disengage E-STOP by twisting the red button one-quarter turn clockwise.
3. The drawer will open automatically when the E-STOP is disengaged and the power is on. Place desired tag(s) in the drawer.
4. Start Labelase<sup>®</sup> Producer<sup>™</sup> software on your PC.
5. Load a pre-existing tag layout, or design a new tag layout. NOTE: designing or changing a tag layout requires SUPERVISOR login.
6. Adjust printer setup parameters if necessary (e.g., laser speed). NOTE: other than setting laser speed (LIGHTER/DARKER slider bar), this feature requires SUPERVISOR login.

**NOTE:** The printer should generally be turned on before starting Producer<sup>™</sup>. This will allow Producer<sup>™</sup> to poll the printer for its configuration parameters and load them into Producer's<sup>™</sup> working memory.

If Producer<sup>™</sup> is already running when the printer is turned on, Producer<sup>™</sup> will force-download whatever parameters were last used when Producer<sup>™</sup> was controlling a printer. This can cause unexpected results if the previous printer was a different model, or if its setup was modified for a special application.

**Remember – PRINTER ON FIRST !!**

Optional USB & Ethernet ports exist under the RS 232 port (1, above). Refer to the Communications Section of this manual for instructions on installing the required drivers.

**NOTE:** The Producer<sup>™</sup> software is password protected for all features beyond loading an existing tag layout, entering tag variable data, adjusting laser speed and initiating printing.

The default password for new installations is blank (no data, no spaces). A new password should be created before printer is commissioned for regular operator use.

**Reminder -** The marker is not ready for use and will not feed tags until the E-STOP button is returned to the OUT position by twisting the red button one-quarter turn **CLOCKWISE**.

## LOADING TAGS

When the JM410 ID Tag Printer is on but not printing, the tag drawer will open automatically. Single tags up to 4" x 4" (100mm x 100mm) or multiple smaller tags may be loaded into the drawer.

### Loading a Single Tag

1. Ensure the Tag Drawer is open.
2. Place desired tag into the drawer, aligning the top left corner of the tag to the top left corner of the drawer.
3. The drawer is magnetized so any magnetic tags will hold themselves in place. When printing non-magnetic tags that are smaller than 4" x 4" (100mm x 100mm), a magnetic tag shim is available to secure the tag in the proper position. Place the tag shim so that the inner corner of the "L" shape fits around the bottom right corner of the tag.

*Left: A small single tag is loaded into the tag drawer. Notice the top left corner of the tag is aligned with the top left corner of the drawer. Also notice the "L" shaped tag shim aligned with the bottom right corner of the tag.*

### Loading Multiple Tags

1. Place desired tags into the multi-slot plate fixture for smaller die cut tags. Note: plates for several standard die-cut sizes are available, and custom plates for new sizes or combinations of sizes can be designed upon request.
2. Ensure the Tag Drawer is open.
3. Place the Plate Fixture into the Tag Drawer. The engraved ITM number should be positioned at the outside edge of the drawer.

*Left: This is an example of a multi-slot plate fixture for loading several small tags.*

## PRINTING A TAG

**Note** - The following assumes the JM410 ID Tag Printer has already been setup with a tag layout. For more information on setting up a tag layout, refer to the Labelase® Producer™ Software Manual.

There are several ways to print a tag using the JM410 ID Tag Printer.

1. Load tag(s) according to the directions above.
2. One of the following actions will initiate printing:
  - a. Pressing the **PRINT button** on the optional tethered remote control.
  - b. Pressing the **F12 key** on your PC.
  - c. Placing the mouse pointer over the **Begin Print** button on your PC and left clicking.
  - d. A **print command** may be sent from your host computer to your PC via Extended Protocol.
3. The drawer will begin to close as printing starts, and will continue to move in small incremental steps as each line is printed.
4. When printing is complete, the drawer will automatically return to the fully open position.
5. Once the drawer has stopped moving, remove tag(s) and reload if desired.

**Note:** the inside left corner of the drawer is the origin (x=0, y=0) for Producer™ tag layouts, and the arrow indicates the inward motion of the drawer during printing. When using a plate, the printable area of a tag will generally not start at the origin.

## STORING THE JM410

1. When not in use, the drawer should be pushed inside the JM410 ID Tag Printer. This will prevent dust from accumulating in the drawer as well as reduce the risk of personal injury associated with the drawer protruding into the work area.
2. Engage the E-Stop by pressing in the red button to prevent the JM410 ID Tag Printer from operating unexpectedly. Gently push the drawer by hand.
3. The status line on the bottom of the Producer™ screen will display ESTOP and IDLE.
4. When you are ready to print more tags, disengage the E-Stop by twisting the red button one-quarter turn clockwise to return the JM410 to normal service. The drawer will automatically return to the full open position.

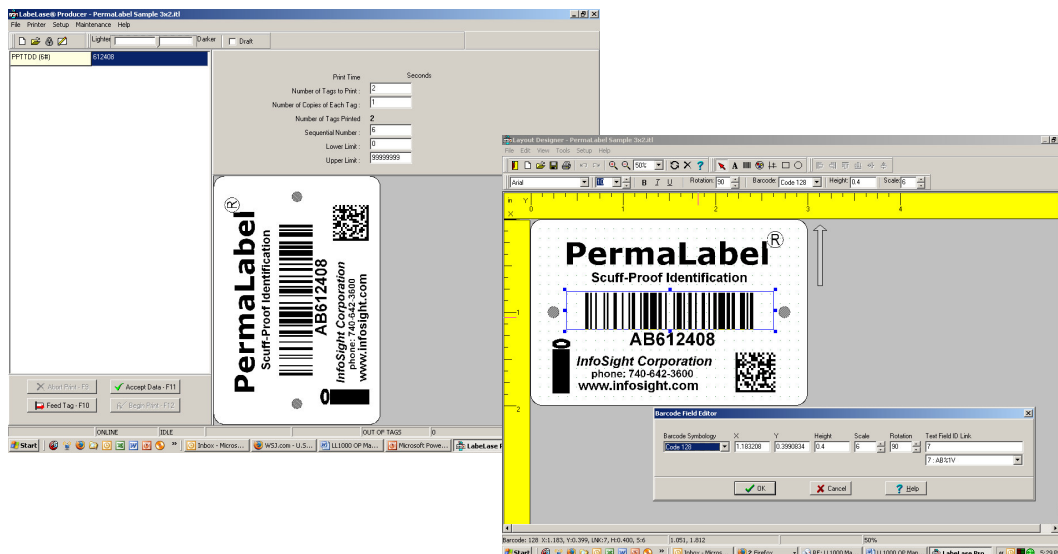

## LABELASE® PRODUCER™ SOFTWARE

LabeLase® Producer™ is an integrated, Windows-based application for complete control of tag design and printing. For complete details, please refer to the ONLINE REFERENCE MANUAL supplied with the software, or on the web at [www.infosight.com/labelaseproducer/index.htm](http://www.infosight.com/labelaseproducer/index.htm).

### Features:

The software has many features designed to provide maximum flexibility to serve the customer's specific marking needs. Some of these features include:

- ☐ Built-in and online (web access) HELP.
- ☐ Total freedom to change tag layout whenever needed.
- ☐ WYSIWYG (“What You See Is What You Get”) user interface for simple and intuitive tag design.
- ☐ New features emulating popular presentation software packages to speed layout and organization of complex designs containing multiple text and graphics fields.
- ☐ An unlimited number of data, text, barcode and graphics fields.
- ☐ Move fields easily with drag-and-drop.
- ☐ Rotate fields in 90-degree increments.
- ☐ Unlimited UNDO-REDO to easily correct mistakes.
- ☐ Optional placement grid with snap-to placement aid.
- ☐ Optional field anchor display shows field alignment.
- ☐ Zoom in/out for detailed display.
- ☐ Tag geometry features such as holes, slots, bare edges and bend lines can be shown.
- ☐ Prints all PC-installed fonts, including multi-byte characters for Asian languages.
- ☐ User-selectable download of message data from a host computer via RS-232, network TCP/IP, or network file transfer. A wide selection of communications protocols includes InfoSight Extended, emulation of Zebra and Intermec standard printers, and simple comma or tab-separated, flat-file formats. Details can be found in the communications chapter of the online reference manual.
- ☐ Operator entry of message data, for example if the host computer is unavailable.
- ☐ Easy control over printer setup parameters such as laser speed (i.e., formerly known as the “heat” setting for different types of laser tag material) and high/low pixel density (i.e., “draft” and “normal” printing modes)
- ☐ UID Wizard
- ☐ GS1 Wizard
- ☐ Option to lock fields, such as background features, so they cannot be selected, moved, or edited.
- ☐ Windows Service version of Producer™ for operating in the background without the Graphical User Interface.

## PRINTER CONFIGURATION & LASER SETTINGS

The JM410 ID Tag Printer and LabeLase® Producer™ software are designed with a high degree of flexibility and user-control, to enable the system to be used in a wide range of applications and on an ever-increasing array of laser-markable materials.

Calibration and configuration settings are accessed in LabeLase® Producer™ under SETUP-PRINTER CONFIGURATION. On-line help instructions will guide you through each of the available settings. The most common parameters for fine-tuning the performance of the printer beyond the easy-to-use LIGHTER/DARKER SLIDER BAR are LASER SPEED, LASER OFF TICKLE, and LASER ON DUTY CYCLE, all of which are found under the LASER tab. Each of these parameters separately and together can be adjusted to create the right balance of black/white contrast, fineness of detail and cycle time.

As laser speed is increased printing cycle time will be faster. In general, as laser speed increases, duty cycle must also be increased to achieve the same relative blackness. Some materials with especially sensitive surfaces, such as PermaLabel®, will print more consistently at lower duty cycles, and therefore correspondingly lower laser speeds. Tickle controls the readiness of the laser to fire and helps maintain consistency of marking across the tag surface. Some tag materials are more sensitive to power variation than others, but **in most cases this parameter can be left at its factory setting.**

Typical Range of Settings (DRAFT mode OFF):

- Laser Speed: 50-65 ips
- Laser Off Tickle: 7-15  $\mu$ s
- Laser On Duty Cycle: 60-95%

Each printer is calibrated in our factory before shipping, and the results are recorded. Save this tag in the event you ever want to return the printer to its original factory configuration.

Experience has shown the following settings to be a good starting point for the most common types of tag material. Each individual application may then be fine tuned to achieve the right balance of cycle time, fineness of detail, and black/white contrast.

**Calibration Tag**

### Typical Laser Settings (DRAFT mode OFF)

	InfoTag® High Temp	Pic-Anneal®	PermaLabel®
Laser Speed	70	60	50
Tickle	15	15	15
Duty Cycle	95%	95%	95%

## CYCLE TIME CONSIDERATIONS

Tag layout and printer configuration can have a significant influence on cycle time. Here are a few techniques that in many cases can significantly speed printing.

1. Select DRAFT mode. When DRAFT mode is on, stepper and mirror resolution, laser speed, font sizes, and barcode and graphic scales are automatically adjusted.
2. Increase laser speed (move slider bar to LIGHTER). It may be necessary to increase Laser Duty Cycle to maintain black/white contrast.

3. Use ARIAL BLACK font for text, to create darker easier-to-read characters. Also try using the BOLD font setting instead of a larger font size.
4. Design printing to run ACROSS the tag at 90° rotation (right angles to tag feed) rather than down the tag at 0° rotation (printing parallel to tag feed is slower).

5. Avoid drawing graphic boxes around text or other graphics with long vertical (parallel to tag feed) lines.

7. Keep graphics/logo X-scale and Y-scale factors equal to 1. If the graphic or logo must be re-sized to fit on the tag, use an external application such as MS PAINT to change the dimensions of the image and re-save the BMP file before importing into Producer™.

## USING AN EXHAUST EXTRACTOR

The JM410 ID Tag Printer includes an optional coupling port for an exhaust extractor, located on the back of the printer.

Certain printing situations call for removing any exhaust fumes from the printing area. These situations include:

- printing on materials that create objectionable fumes
- printing on materials that create hazardous fumes
- printing large quantities of metal tags in enclosed environments

### Note:

When printing large quantities of metal tags in an enclosed area or printing materials that cause objectionable or hazardous fumes, an exhaust extractor should be used to remove these fumes from the printing area.

## BEST PRACTICES AND HELPFUL HINTS

To facilitate sharing of best practices among users, InfoSight has created an online DISCUSSION FORUM. You may access the forum via our home webpage or directly at <http://www.infosight.com/forums/>.

## BASIC TROUBLE SHOOTING

**Service during normal business hours (Monday-Friday, 8am-5pm): 888-642-3600 or 740-642-3600**

**Emergency after-hours service: 1-800-401-0716 (outside the USA call 740-642-4666)**

**Problem: Marker does not respond to a print command.**

- ☐ Check power cord.
- ☐ Check key switch.
- ☐ Check E-STOP.
- ☐ Check Comms cable to PC.
- ☐ Producer™ software must be running on the connected PC.
- ☐ Bottom of main Producer™ screen indicates printer status – “ONLINE”, “ESTOP” or “UNKNOWN MODE”. If UNKNOWN MODE, check communications cable and settings.
- ☐ From within Producer™, click on HELP-ABOUT. If the FIRMWARE VERSION is blank or (or reads ?.), your PC does not see the printer. Check communications cable and settings (SETUP-PREFERENCES-TAG PRINTER COMMUNICATIONS).

**Problem: Tag print appears very light, fine lines appear to drop out.**

- ☐ Reduce laser speed (DARKER)
- ☐ Increase Laser Off Tickle (SETUP-PRINTER CONFIGURATION).
- ☐ Lens or mirror may require cleaning (see Maintenance section below).

**Problem: Tag print shows “shadows”**

- ☐ Decrease Laser Off Tickle (SETUP-PRINTER CONFIGURATION).

**Problem: Barcode too long for tag size.**

- ☐ Reduce number of characters in barcode data, especially unnecessary punctuation marks.
- ☐ Use more efficient barcode symbology, such as code 128 for all numerics (instead of code 39, for example).
- ☐ Reduce barcode scale.

## NORMAL MAINTENANCE & SERVICING

The only regular maintenance required is periodic cleaning of both surfaces of the final lens and Galvanometer mirror.

The incoming AC line is fused on both legs. Changing fuses is not a preventive item; it only needs to be done if they are blown.

### LENS CLEANING PROCEDURE

**CAUTION: LASER OPTICS ALIGNMENT SHOULD ONLY BE PERFORMED BY A QUALIFIED TECHNICIAN.**

**ALWAYS BE SURE POWER IS OFF BEFORE OPENING THE CASE.**

To reach the lenses in order to clean them:

1. Remove the outer case of the JM410 by removing the four (4) bolts in the rear of the case.

2. Ensure the drawer is pushed completely into the printer. Slide the case off of the printer by lifting straight up.

3. Clean both mirrors and both sides of all three lenses by following the procedure below.

4. Slide the case back on and secure the bolts when finished.

#### Cleaning the lenses:

**CAUTION: DO NOT TOUCH LENS WITH FINGERS OR ANY SUBSTANCE CONTAINING ALCOHOL, OR PERMANENT DAMAGE MAY RESULT.**

**DO NOT ATTEMPT TO ROTATE EITHER MIRROR, OR PERMANENT DAMAGE MAY RESULT**

- ☐ Use a cloth or Q-Tip that will not leave any fibers and is not abrasive.
- ☐ White vinegar is recommended. **DO NOT USE ALCOHOL!!**
- ☐ Gently wipe the moistened cloth across the lens so that the liquid evaporates behind the cloth, avoiding streaks.
- ☐ **DO NOT RUB HARD!**
- ☐ **DO NOT USE COMPRESSED AIR TO CLEAN OPTICS!**
- ☐ **DO NOT USE EYE GLASS WIPES CONTAINING ALCOHOL!**
- ☐ For optics that are severely contaminated or damaged, contact InfoSight for replacement.

## FUSE REPLACEMENT

The incoming AC line is fused on both legs. Before replacing the fuses, first determine and fix the cause of the blown fuses.

**CAUTION: BE SURE TO REMOVE THE AC POWER CORD BEFORE REMOVING THE FUSE HOLDER OR PERFORMING ANY OTHER TROUBLESHOOTING OR MAINTENANCE !**

To replace the fuses, remove the fuse holder on the back of the printer between the power cord input and the on-off rocker switch. The fuse holder only goes back in one-way. If it does not fit easily, turn it upside down and then insert it gently so that it snaps in place.

FUSE HOLDER

FUSE HOLDER REMOVED

FUSES ARE RATED FOR  
250V / 5A AC

## CUSTOMER SERVICE

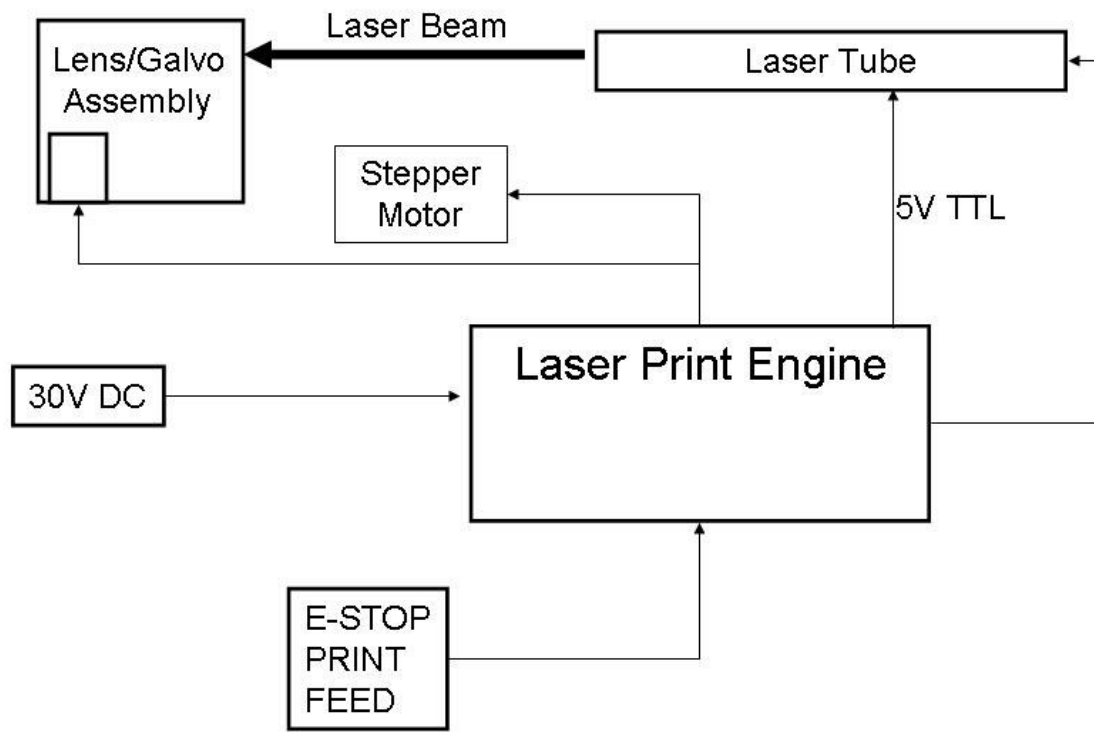

How to reach customer service:

Phone Support	InfoSight Corporation Customer Service offers free phone support to answer questions during normal non-holiday working hours, Monday through Friday 8am to 5pm Eastern time (New York, USA). Call 1-888-642-3600, or outside the USA call 740-642-3600.
Emergency Service	After regular business hours, call 740-642-4666.
On-Site Service	InfoSight Corporation can dispatch a Field Service Engineer to your facility to perform equipment start-up, repair, maintenance, and training.
Service Contracts	Periodic scheduled on-site maintenance, technical service and extended warranties can be arranged by contacting Customer Service at the number below.
Factory Service	Call Customer Service for a Return Authorization Number before returning equipment to our factory for repair and/or major maintenance.

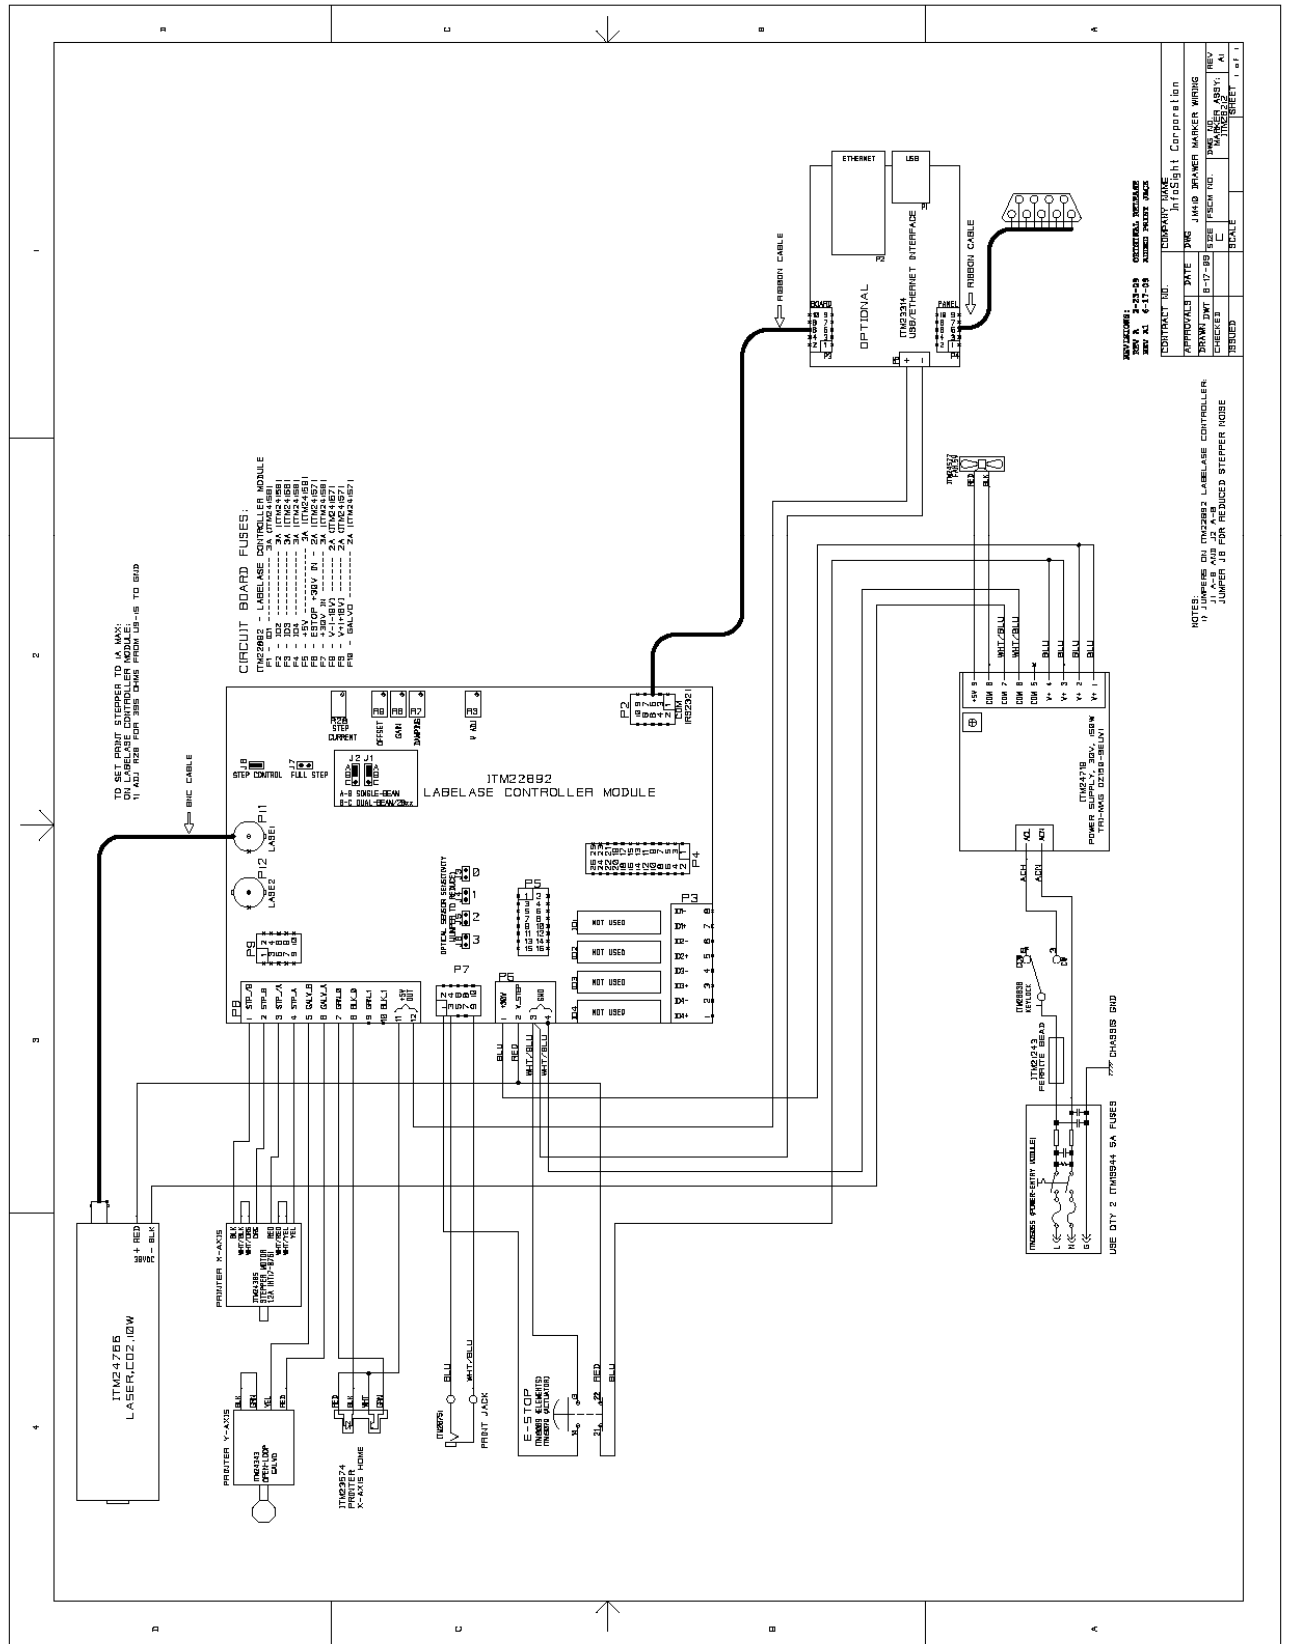

For more information regarding any of these services, call 888-642-3600 (outside the USA call 740-642-3600) and ask for Customer Service.

Or, visit us on the worldwide web at [www.infosight.com](http://www.infosight.com)

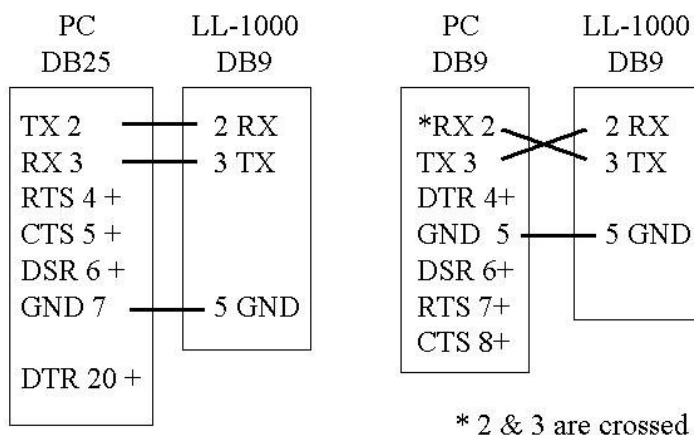

# Functional Block Diagram

# Wiring Diagram

## JM410 SERIAL PORT CONNECTION TO AN IBM-PC OR EQUIVALENT.

Note: Handshake protocol is XON / XOFF. Communications adapters such as USB to RS232 must support XON / XOFF.

XON is DC1 CTL-Q or 11h or 17 decimal

XOFF is DC3 CTL-S or 13h or 19 decimal

## LASER SAFETY

04/23/03

### Section I: Introduction to Laser Safety

Lasers, like arc welders, are sources of intense light that require certain precautions to insure a safe, comfortable and compliant working environment. This is especially true since the laser included in this marking equipment operates in the infrared (invisible) portion of the light spectrum. The enclosure surrounding the marking area is designed to prevent human exposure to the light emitted by the laser. The following information covers the procedures taken to design a safe, efficient environment for laser marking equipment.

Laser products are categorized into one of four classes based upon the power of the laser light that is accessible to any person during normal operation. These classes range from Class 1, the lowest class requiring no additional safeguards other than those provided by the manufacturer, to Class 4, the highest class that requires additional operator and working environment safeguards for safe operation.

Class 1 laser marking systems include enclosures integral to the workstation that are constructed to prevent human access to the laser beam. Class 1 systems are safe in all working environments; they are installed and operated as any other industrial machine tool. Class 1 laser systems do not require the use of any special laser safety equipment by operators or bystanders during their normal operation.

Class 4 laser marking systems do not incorporate protective enclosures. Extra precautions are required. Avoid eye or skin exposure to direct or scattered radiation.

The JM410 ID Tag Printer complies with Class 1 during normal use because of the numerous interlocks provided as detailed in section II.

During service and/or alignment the JM410 ID Tag Printer becomes a Class 4 device. Servicing should be performed only by a **Qualified Laser Service/Safety Technician!** Because of the Class 4 classification, InfoSight will provide such a person to be available to the end user of this marker.

The nominal power output of the laser used is 10 watts, with a maximum peak power output of 30 watts. It is a CO<sub>2</sub> infrared (invisible) laser with a wavelength of 10.57 to 10.63 microns. The Radiant energy and the wavelength are less than Class 1 requirements during normal operation.

### Section II: Types of safety interlocks.

There are several types of safety features provided on the InfoSight JM410 ID Tag Printer:

Type 1 includes **mechanical switches**. These switches are located atop the printer and on the rear of the printer. These switches remove power supplied to the laser printer, as shown in electrical drawings.

- Switch A -- Large Red, easily accessible, E-STOP operator Emergency Stop Push Button.
- Switch B -- Key switch
- Switch C -- On/Off rocker switch

Type 2 includes **optical sensors**. Sensors monitor whether tag material is in place and the printer is able to move the tag material. These two sensors are monitored by the marking microprocessor.

Type 3 includes **mechanical design**. Here, narrow slots are provided to minimize the release of laser radiation. The beam path from laser tube to final pass through lens is entirely enclosed in a metal shield, with suitable material that will absorb the heat produced by the beam emitting from the CO<sub>2</sub> laser.

Type 4 includes **Password Security access**. The Software requires a **supervisor password** to change layout of tags or to alter the operating parameters of the printer itself.

The features and precautions described above are designed with the safety of the user in mind. Should you have any questions or suggestions please contact InfoSight directly.

## **Declaration of Conformity**

### **InfoSight Corporation**

20700 US Highway 23 Chillicothe, Ohio 45601  
(740) 642-3600 TEL (740) 642-5001 FAX

InfoSight hereby declares the equipment specified conforms to the Classification(s), Directive(s) and Standard(s) set forth in this document.

InfoSight produces laser systems within one of two classes as identified and classified by the CDRH. These are Class I and Class IV. (See CDRH 21 CFR (J) 1040.1 - 1040.5). End user of the equipment should be familiar with ANSI, CDRH and OSHA standards for radiation emitting devices as they apply to them also.

#### **ANSI Z136.1 - 1993**

During servicing we will provide adequate data to the LSO (Laser Safety Officer) enabling LSO to designate NHZ (nominal hazard zone) as required pursuant to Class IV 3.4.1

#### **CDRH 21 CFR (J) 1040.1 1040.5**

#### **OSHA Publication 8-1.7 Section II Chapter 6**

#### **Certifications:**

##### **EMC Emissions**

EN 55022:1994/A1:1995/A2:1997 Class A ITE emissions requirements (EU)

FCC 47 CRF Part 15 Class A emissions requirements (USA)

##### **EMC Immunity:**

EN 50082-2:1995 EMC heavy industrial generic immunity standard

#### **Name and Publication Date of Standard Used to Evaluate Laser safety:**

IEC 60825-1:1003 + A2:2001

**Note:** InfoSight design guidelines are drawn from ANSI and CDRH
