Ceramic Bar Coded Tiles

InfoSight Corporation provides sequential bar coded ceramic tiles which can be used to track products through extreme temperatures or aggressive chemical processes. The sequentially numbered, reusable bar codes are designed to provide "license plate" identification. The codes may be either Linear (picket fence) or 2D symbologies and are available in a variety of sizes and thicknesses which can be adhesively attached to other ceramic surfaces.

InfoSight Corporation also provides bar coding traceability solutions for direct application to a variety of substrates such as ceramics (e.g. catalytic converter cores) and glass (e.g. solar cells).
